

Read me: Individualized benefits and access to active labor market programs boost refugee women's economic integration

Data sources

The main analysis is based on individual level administrative data covering the years 2009-2020 compiled by Statistics Sweden. We use data from the following registers:

1. Registret över totalbefolkningen (RTB)
2. Longitudinell integrationsdatabasen för sjukförsäkrings- och arbetsmarknadsstudier (LISA)
3. Data från Registret för integrationsstudier (STATIV)
4. Data från Registerbaserad arbetsmarknadsstatistik (RAMS)
5. Svenska för invandrare-registret (SFI)
6. Asylansökningar, asylum applications from the Swedish Migration Agency

You can read more about the register data [here](#).

Ordering data

Before ordering the data from Statistics Sweden researchers need to obtain approval from the Swedish Ethical Review Authority. You can find additional details [here](#).

Statistics Sweden can only approve the release of data to a Swedish entity responsible for research. Therefore, as a researcher, you must be associated with a Swedish organization. You can find additional details [here](#).

Analysis

The analysis was conducted using Stata (v 18.0) and a Windows operation system.

Code-files

The file "_master.do" calls the following do-files in order to prepare the data and generate all the figures and tables in the paper:

- *0 - merge_data.do*: creates dataset of immigrants (regardless of type of permit).
- *1 - intro_munis.do*: creates dataset of municipalities with an introduction program prior to the reform.
- *2 - income_quartiles.do*: creates annual income quartile thresholds (p25 and p50) for the population aged between 20 and 64 (natives and immigrants).

- *3 - muni.do*: creates municipality-level characteristics.
- *4 - mv_cob.do*: cleans data on country of birth from the Swedish Migration Agency.
- *5 - children.do*: constructs dataset on number of children and children's ages for the full immigrant sample.
- *6 - cohab.do*: creates dataset of cohabitants for the full immigrant sample.
- *7 - monthly_outcomes.do*: constructs dataset of monthly outcomes (earnings and SFI).
- *8 - sample_selection_incl_placebo.do*: uses the full immigrant sample to construct the sample of refugees and adds information on monthly outcomes, municipality characteristics, children, cohabitation status.
- *9 - variables_incl_placebo.do*: defines covariates, outcome variables, running variable for the RDD.
- *10 - validity.do*
 - Output: Table A3, Table A4, Figure A1
- *11 - sumstat.do*
 - Output: Table A1, Table A2, Figure A2
- *12 - analysis.do*
 - Output: Table 1, Figure 1, Figure 2, Table A5, Table A6, Table A7, Table A8, Figure A3, Figure A4, Figure A5, Figure A6, Table A4.1
- *12a - mechanisms.do*
 - Output: Figure 4, Figure 5, Figure 6, Table A12, Table A13, Table A14, Figure A9
- *13 - sensitivity.do*
 - Output: Figure 3, Table A9, Table A10, Table A11, Figure A7, Figure A8
- *14 - bevelander_et_al_replication.do*
 - Output: Figure A6.1
